PROFESSIONAL SUMMARY

Results-driven Information Security Analyst and Computer Science senior holding the **CompTIA Security+** certification and actively pursuing the **AWS Certified Solutions Architect – Associate** credential (expected October 2026). Demonstrates hands-on experience executing vulnerability management across 300+ enterprise endpoints, DHS Cyber Hygiene compliance reporting, and security log analysis utilizing Tenable, Microsoft Defender, and Sentinel. Skilled in engineering automated security workflows using Python, Bash, SQL, KQL, and REST APIs to accelerate remediation and streamline incident response operations.

PROFESSIONAL EXPERIENCE

University of Massachusetts Boston — Boston, MA

Junior Information Security Analyst | Aug 2025 – Present

- Executed VMDR workflows across 300+ Windows workstations using Tenable and Microsoft Defender, significantly reducing exposure time and accelerating remediation tracking.
- Performed security log analysis utilizing Microsoft Sentinel and KQL to investigate threats, triage security alerts, and support incident response operations.
- Analyzed DHS Cyber Hygiene scan findings and synthesized weekly executive reports on vulnerabilities and SLA compliance to enhance tracking visibility.

BU Spark! — Boston, MA

Software Engineer Intern | May 2025 – Jun 2025

- Engineered SQL-based data pipelines and a React interface backed by Python REST APIs to ingest public datasets for over 2,000 residents.
- Facilitated Agile/Scrum ceremonies for a 5-person engineering team to streamline sprint workflows and accelerate feature delivery.

PROJECTS

QueryShield – SQL Injection Risk Analysis Platform | github.com/The1keyy/queryshield

FastAPI, React, PostgreSQL, Docker, AWS EC2 | Mar 2025 – Apr 2025

- Engineered, containerized, and deployed a full-stack security application using FastAPI, React, PostgreSQL, Docker, and AWS EC2 to analyze SQL queries for injection risks and deliver structured risk scores.
- Developed an interactive React + Tailwind dashboard with JWT authentication allowing users to submit queries, inspect severity analyses, and review stored scan history.

Infoblox Enterprise DDI Lab | github.com/The1keyy/infoblox-nios-enterprise-ddi-lab

Infoblox NIOS 9.0, DNS, DHCP, IPAM, Enterprise Networking

- Deployed and configured an Infoblox NIOS 9.0 grid to centralize DNS, DHCP, and IP address management (DDI) across enterprise network environments, validating core network service resilience.
- Configured DNS zones, DHCP scopes, and IPAM network views to simulate enterprise-grade network resilience, failover, and access control policies.

TECHNICAL SKILLS

- **VMDR & Security Tools:** Tenable, Microsoft Sentinel, Microsoft Defender, Risk-Based Vulnerability Management (RBVM), Exposure Tracking, DHS Cyber Hygiene Reporting, Wazuh, Suricata, KQL, Entra ID, Infoblox
- **Automation & Scripting:** Python, Bash, SQL, REST APIs, FastAPI, PostgreSQL, JSON, Git, GitHub
- **Cloud & Infrastructure:** AWS (EC2), Linux (Ubuntu), Docker, Windows Workstations, TCP/IP, DNS, DHCP, Firewalls, Zero Trust, Least Privilege
- **Operations:** Security Incident Investigation, Alert Triage, Phishing Analysis, Vulnerability Runbooks & SOPs, Agile/Scrum

EDUCATION

- **Bachelor of Arts in Computer Science** — The University of Massachusetts Boston
- **Relevant Coursework:** Computer Security, Operating Systems, Computer Architecture, Advanced Data Structures and Algorithms

LEADERSHIP EXPERIENCE

National Society of Black Engineers (NSBE) & ColorStack — Chapter President
