EDUCATION

UMass Boston, Computer science
2025 - Present

SKILLS

Python

Vulnerability Research

Cybersecurity Research

Git/GitHub

Network Security

Technical Writing

INTERESTS

Dancing, Running, Art, Traveling

PROFILE

I am a Computer Science student, NSBE President, and aspiring cybersecurity professional with hands-on experience in security operations, vulnerability management, security alert investigation, and web development. Through my work in a university Security Operations Center, I have helped protect campus systems by reviewing security findings, analyzing suspicious activity, documenting incidents, and tracking remediation efforts. As NSBE President, I also develop leadership, communication, event coordination, and team-building skills while supporting the academic and professional growth of fellow students. I am especially interested in cybersecurity research, AI and LLM security, and emerging technologies. I bring strong problem-solving, technical writing, adaptability, leadership, and a willingness to learn new tools and concepts in fast-changing technical environments.

PROJECT

QueryShield — SQL Injection Risk Analysis API ([link](#))

Backend security API that analyzes SQL queries and detects injection attacks before execution. Assigns risk scores and flags malicious patterns like OR 1=1, comment injections, and UNION-based attacks.

ReadScope — Reading Performance Analytics Platform ([link](#))

Built a reading analytics backend service using FastAPI and PostgreSQL that evaluates transcript accuracy and generates structured performance metrics.

WORK EXPERIENCE

Junior Information Security Analyst, UMass Boston,

Supported vulnerability management across **300+ campus workstations** by coordinating Tenable scans, identifying patching gaps, organizing affected assets, and tracking remediation.

Investigated security alerts, suspicious sign-ins, endpoint findings, and account activity using **Microsoft Sentinel and Microsoft Defender**.

Analyzed reported phishing emails by reviewing sender information, URLs, and attachments.
